

**What do I want to learn or understand better?**

It has been really fun working with this project as we have had much freedom on deciding what type of application we want to do. I had previously no experience with React or HTML and CSS for that part, so learning these things have been a fun experience. Becoming better at these things takes time of course, but I like that we could learn at our own pace, help each other and give each other tips and tricks.

During this course, I have gotten a better understanding of how to work in a large group and how following agile practices can contribute to the workflow. Sprints, user stories and scrum was all new to me and applying all these things have given me a better appreciation for them and the value they can bring.

If I were to do another similar project I would continue to learn more about React and frontend programming as well as deepen my knowledge in other programming languages. This time maybe something that is more commonly used for developing IOS or Android apps.

**How can I help someone else, or the entire team, to learn something new?**

Since we have mostly had pair-programming during the project and worked on different things, we haven't asked each other for help as much. We had a discussion about this later in the course about how we should help each other if someone has a question or needs help, and decided that we should write in good time in Discord. We also decided that the way we ask the question should make it as easy as possible for the other team members to help, that is, we show what we have done so far and the things we have tried that are not working and also preferably post a link to some material we have used.

**What is my contribution towards the team's application of scrum?**

This week we had a meeting to start the planning of the report. We had discussions about how we should structure it and what topics we should include in it. During the course, I have attended most of the supervision meetings and all of the sprint reviews where we discussed the finished user stories, wrote new user stories for the upcoming sprint and discussed and wrote the team reflection. We had assigned roles in the team but didn't really use them as much as we had

planned in the beginning when we wrote the social contract. However, we used them now and then later in the project.

**What is my contribution towards the team's deliveries?**

This week was our last sprint and I mostly tried to fix some bug fixes regarding the mobile and laptop view of the website. The popup window was not showing properly so I had to add some CSS to fix that. The links to the mobile menu were also out of place so I fixed that. Throughout the project I have written user stories, worked on the user stories I was assigned and helped write the report. I have also tried to contribute as much as possible with scrum. There were many more features that I and the team would like to include in the project, but we felt that it would be better to focus on the bugs we had considering the time we had left. However, I am very satisfied with what we managed to accomplish with the time span we had.
