What do I want to learn or understand better?

Something I want to learn more about is writing good CSS. So far, I have been writing some sort of CSS in every sprint and it has worked well, but sometimes it is easy to forget that CSS should look different depending on what it is you are styling and just improvise until it looks good. The downside of this is that it can worsen the workflow later in the project, which I have been noticing as I have been needing to rewrite some CSS. However, I think this comes with experience and more experience ensures correct CSS from the beginning.

Furthermore, I would like to learn more about how to make a website compatible with phones to make the website more UX friendly for phone users. As pretty much everyone owns a smartphone today and frequently visits numerous websites on their phone everyday, this seems like an important and suitable task for the project.

How can I help someone else, or the entire team, to learn something new?

I feel like we learn much from each other on the sprint reviews, because throughout the week most of us are pair-programming and working on our respective tasks for the week, and when we come together and discuss what we have done, how it went, and what worked less good, we get a good sense of how to plan the upcoming week by thinking of which user stories we should prioritize next and how we should divide the user stories this time. Our main communication channel is discord, so we can also learn much from each other by sharing our progress in the chat if we have encountered any problem to get help from each other.

What is my contribution towards the team's application of scrum?

The scrum workflow in this sprint has consisted of going through the finished user stories and writing new user new stories. We have been using Trello and it has been a very helpful tool for getting an overview over the project and storing backlog. In the sprint review, every pair also has the role of product owners for an epic of another pair so we have discussed each other's accomplishments for the week and what we think is good and what we could improve next time.

What is my contribution towards the team's deliveries?
This week I have implemented a help button with a popup window that is intended for users that need help with using the calculator. It may not be very useful as the application is pretty straightforward on how it should be used, but we decided as a team that it could be a nice addition. I have also made some small changes such as making it possible to click on the logo to be redirected to the homepage and fixed some bugs.
